## Per-and Polyfluoroalkyl Substances (PFAS) Declaration

Harmful per- and poly-fluoroalkyl substances (PFAS) are an urgent public health and environmental issue facing communities across the United States. In April 2021, U.S. Environmental Protection Agency (EPA) Administrator Michael S. Regan created the EPA Council on PFAS and charged it with developing a coordinated strategy to protect human health and the environment from PFAS.

In October 2021, EPA released its PFAS Strategic Roadmap, which highlights concrete actions the Agency will take across a range of environmental media and EPA program offices to protect people and the environment from PFAS contamination.

Likewise, PFAS restriction proposals are being prepared by multiple European countries, with plans for submission to the European Chemicals Agency (ECHA) in early 2023.

To the best of our knowledge, Asbury Carbons does not intentionally add per- and poly-fluoroalkyl Substances (PFAS) as a raw material or processing aid in the manufacturing of our products.

This information is based upon information provided to us by the suppliers of raw materials and processing aids used to manufacture our products.
